

TRANSFORMING MAPS INTO STORIES & DATA INTO DECISIONS

Learn. Visualize. Communicate. Decide.

Julius Buyengo
(Capacity Development Expert)

MODULE 1

TRANSFORMING MAPS INTO STORIES

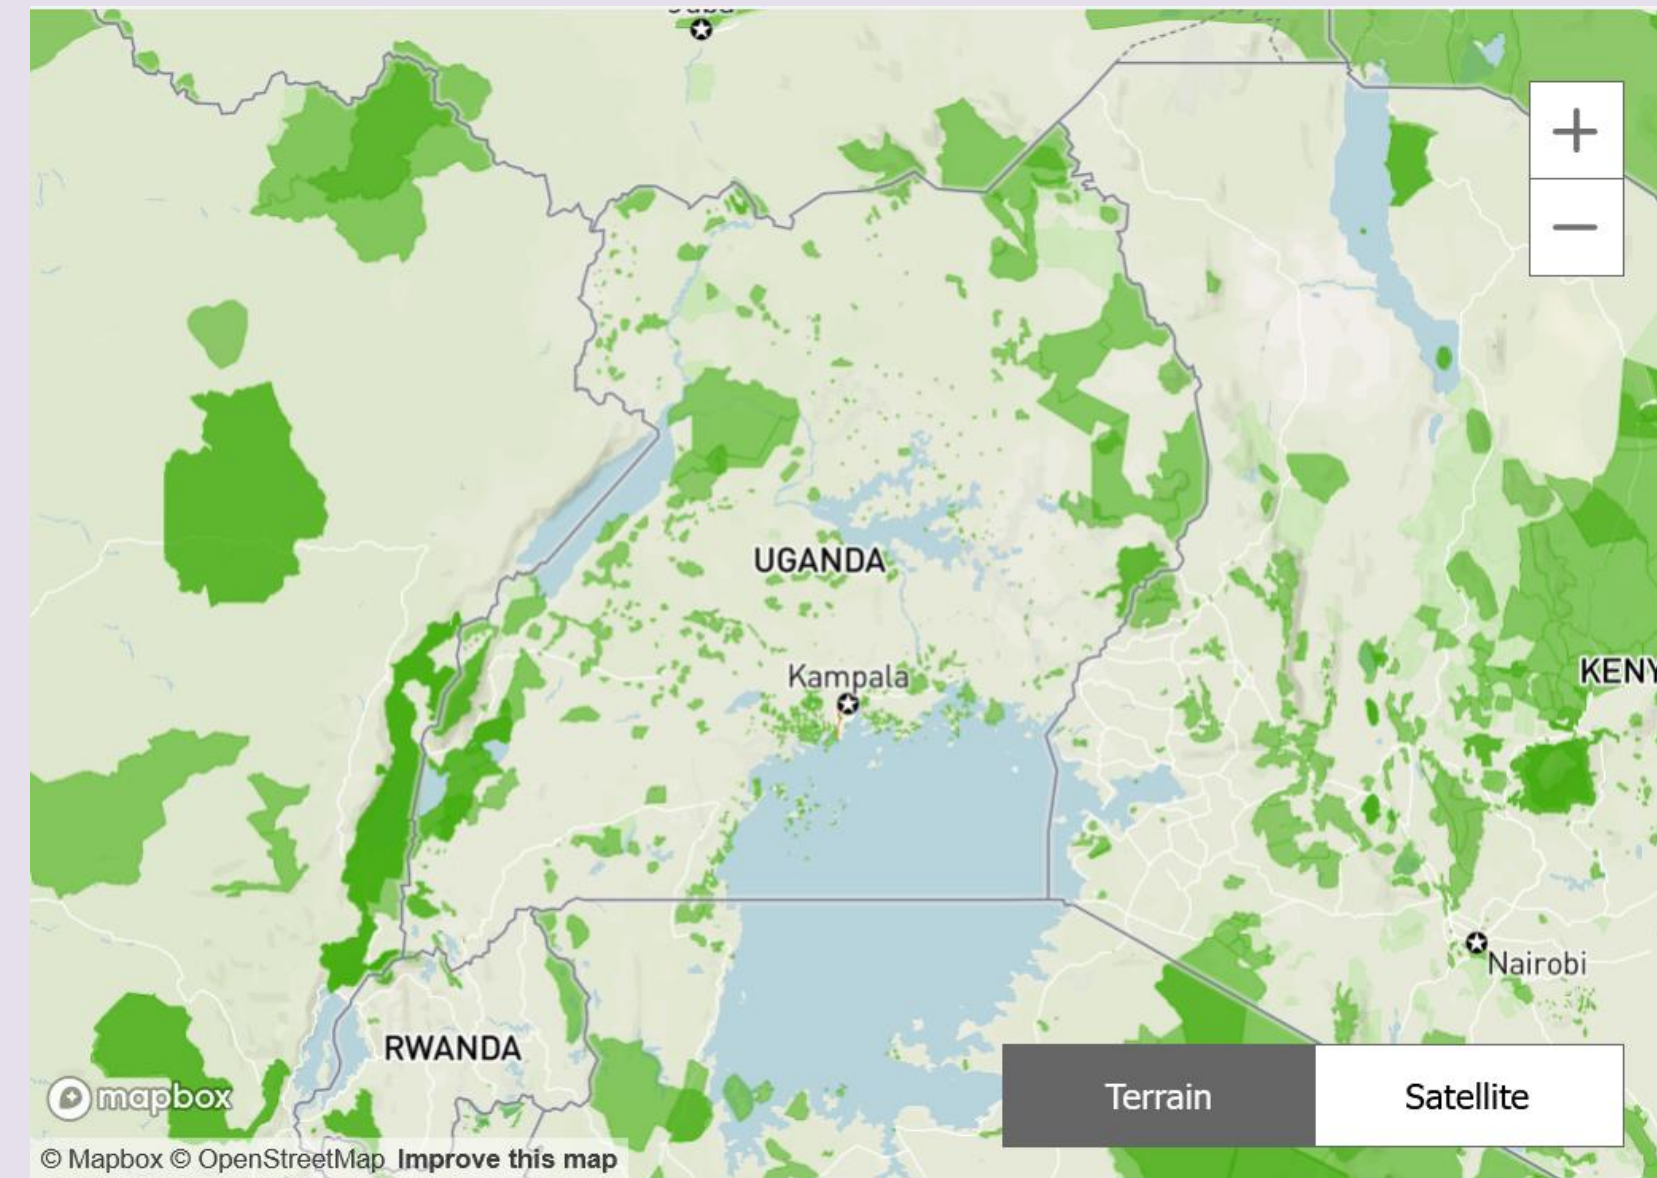

Focus: Utilizing Web Maps, Dashboards, and Story Maps.

- Introduction to **ArcGIS Online** for conservation.
- Building interactive **Web Maps**.
- Designing real-time **Dashboards** for data visualization.
- Crafting immersive narratives with **ArcGIS Story Maps**.

Module 1: | Session 2: Building Interactive Web maps

What is a web map?

1. A *visual representation of geographic data on the internet*.
2. A web map is ***an interactive display of geographic information*** that ***can be opened in browsers, on devices (Smart Phones, tablets), or in desktop map viewers***.
3. A Web map is ***an online map*** that provides a way to work and interact with geographic content organized as layers.
4. A web map is an ***interactive, digital display*** of geographic information ***served and consumed over the internet***.

Protected Areas web map

Module 1: | Session 2: Building Interactive Web maps

Components of a web map?

1. *Basemap*: Provides foundational geographic context like roads, terrain, or imagery.
2. *Data Layers*: Overlaid thematic information such as protected areas, water bodies, roads, settlements etc.
3. *Interactive Tools*: Additional tools that support what you want your users to do with your web map:
 - tell stories;
 - perform analytical studies;
 - collect data in the field; or
 - monitor and manage your operations.

(Zoom in/out, Pop-up windows, search bars, and measurement widgets).

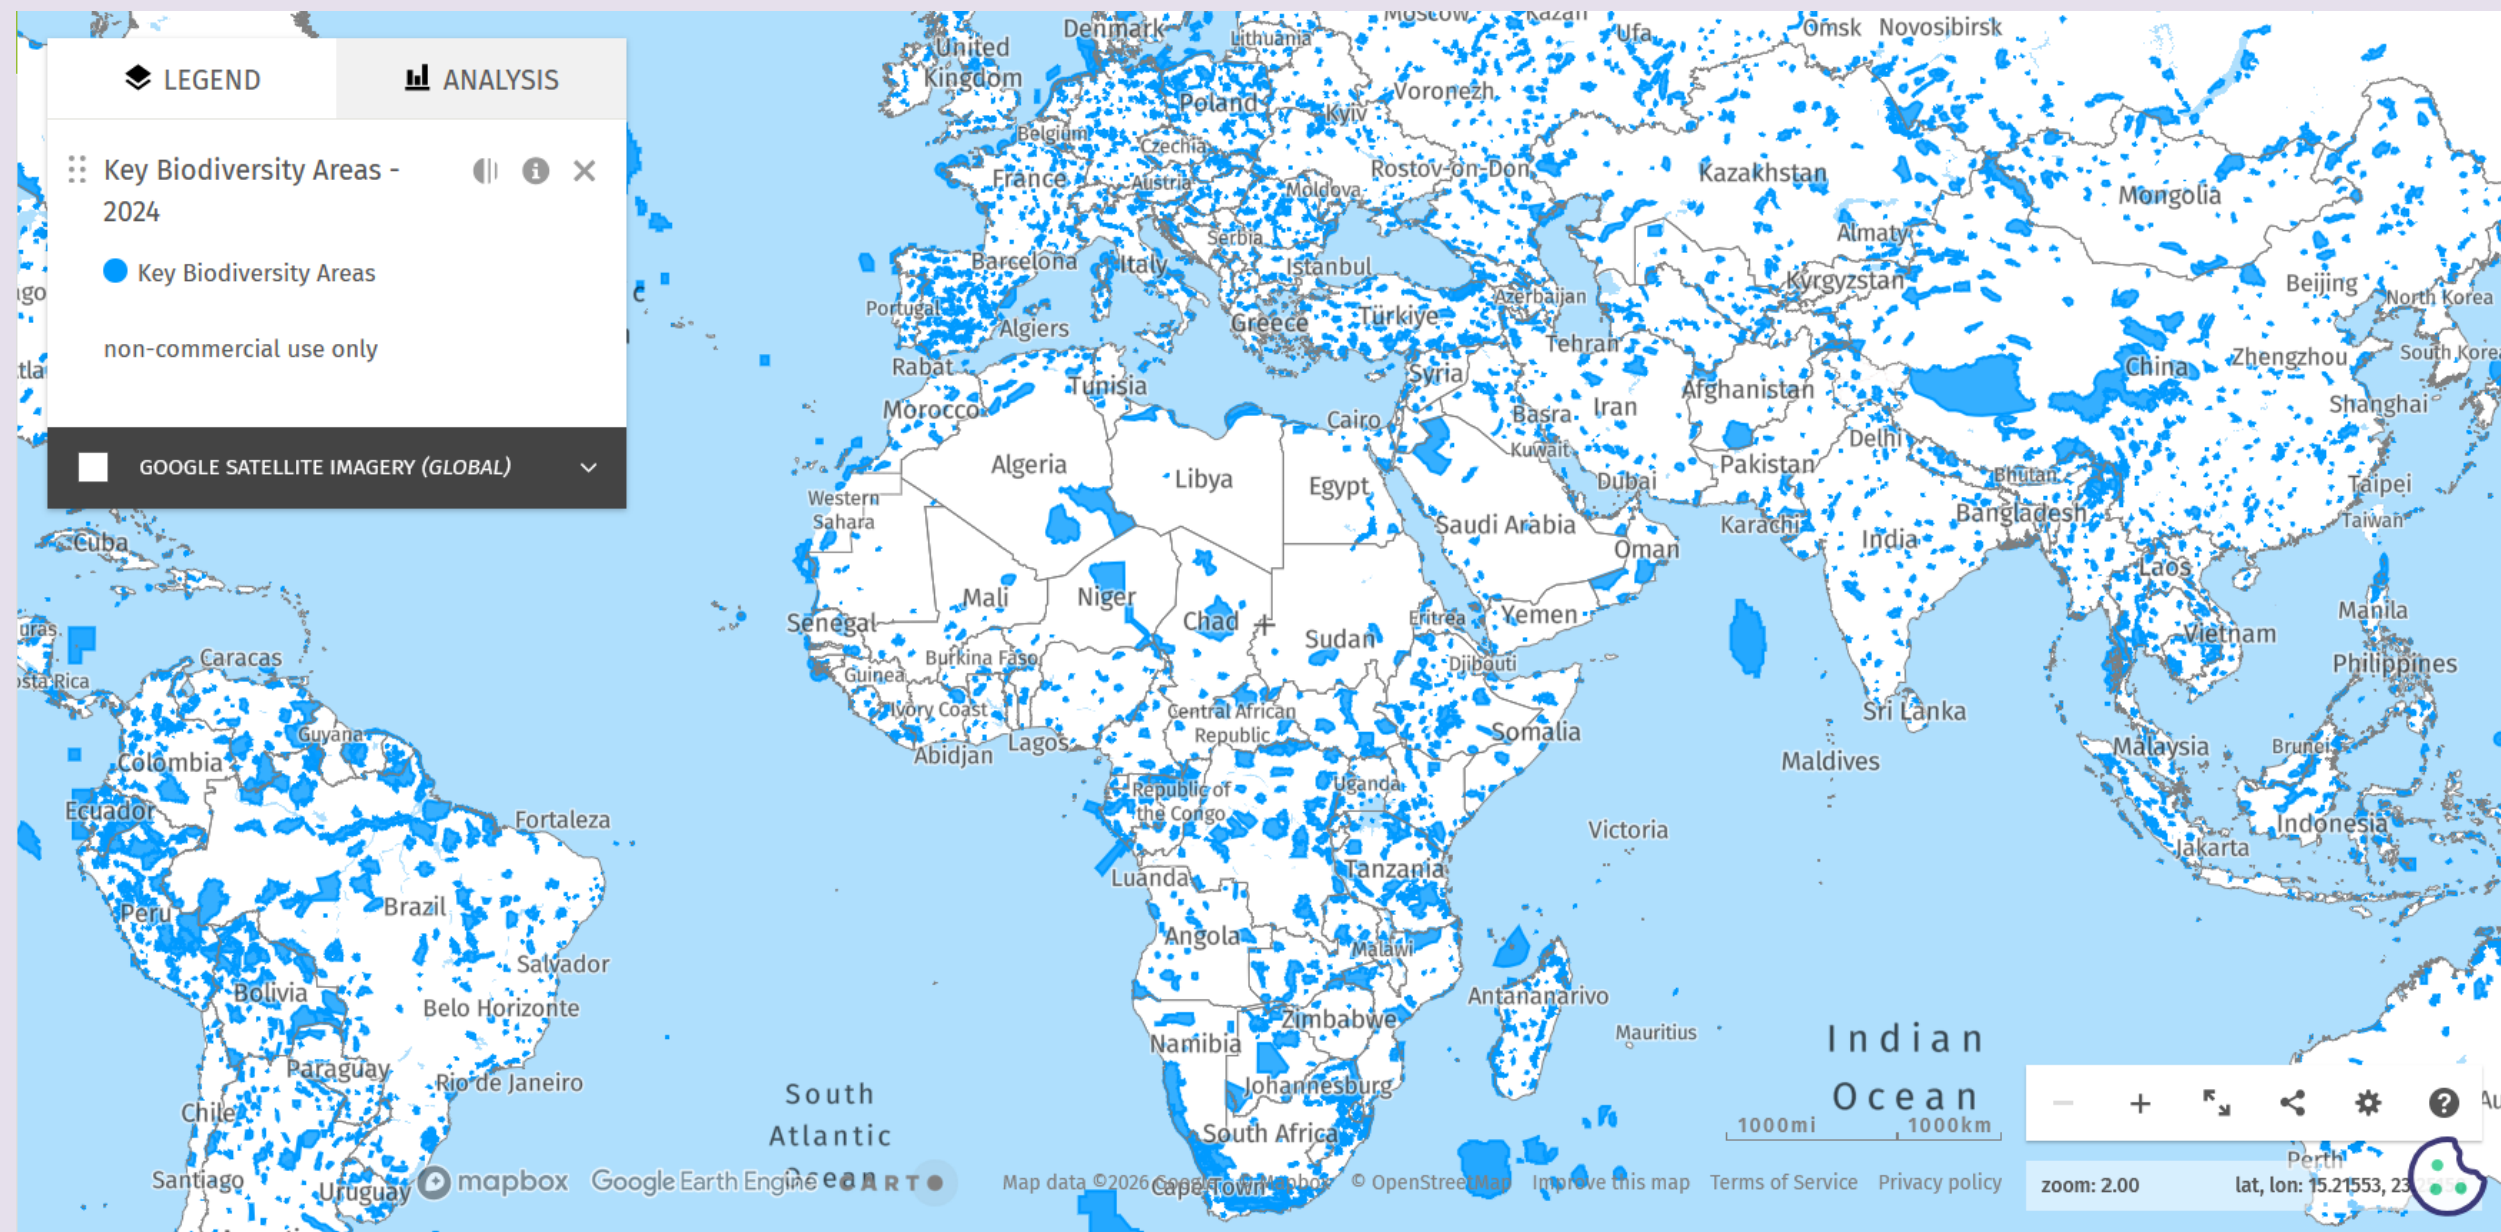

Module 1: Session 2: Building Interactive Web maps

Sharing a web map?

- A web map is easy to share with others.
- You simply provide a hyperlink to the web map you wish to share and embed it on websites or launch it using a wide range of GIS apps.
- Examples:

[Protected areas in Madagascar](#)

[Global Nature watch](#)

Module 1: | Session 2: Building Interactive Web maps

Making and sharing a web map?

Web mapping/online mapping is the process of creating, using and distributing maps on the Web through the use of Web geographic information systems (Web GIS).

Popular Web GIS Platforms

- **ArcGIS Online:** A cloud software by Esri used to host interactive maps, store spatial data, and build web apps.
- **Carto:** A spatial analysis and web mapping platform that helps organizations visualize location data in a browser.
- **Mapbox:** A location data platform that provides custom interactive maps and developer tools for websites and mobile apps.
- **Google Earth Engine:** A cloud service designed for analyzing large sets of satellite images and global environmental data.

Module 1: Session 2: Building Interactive Web maps

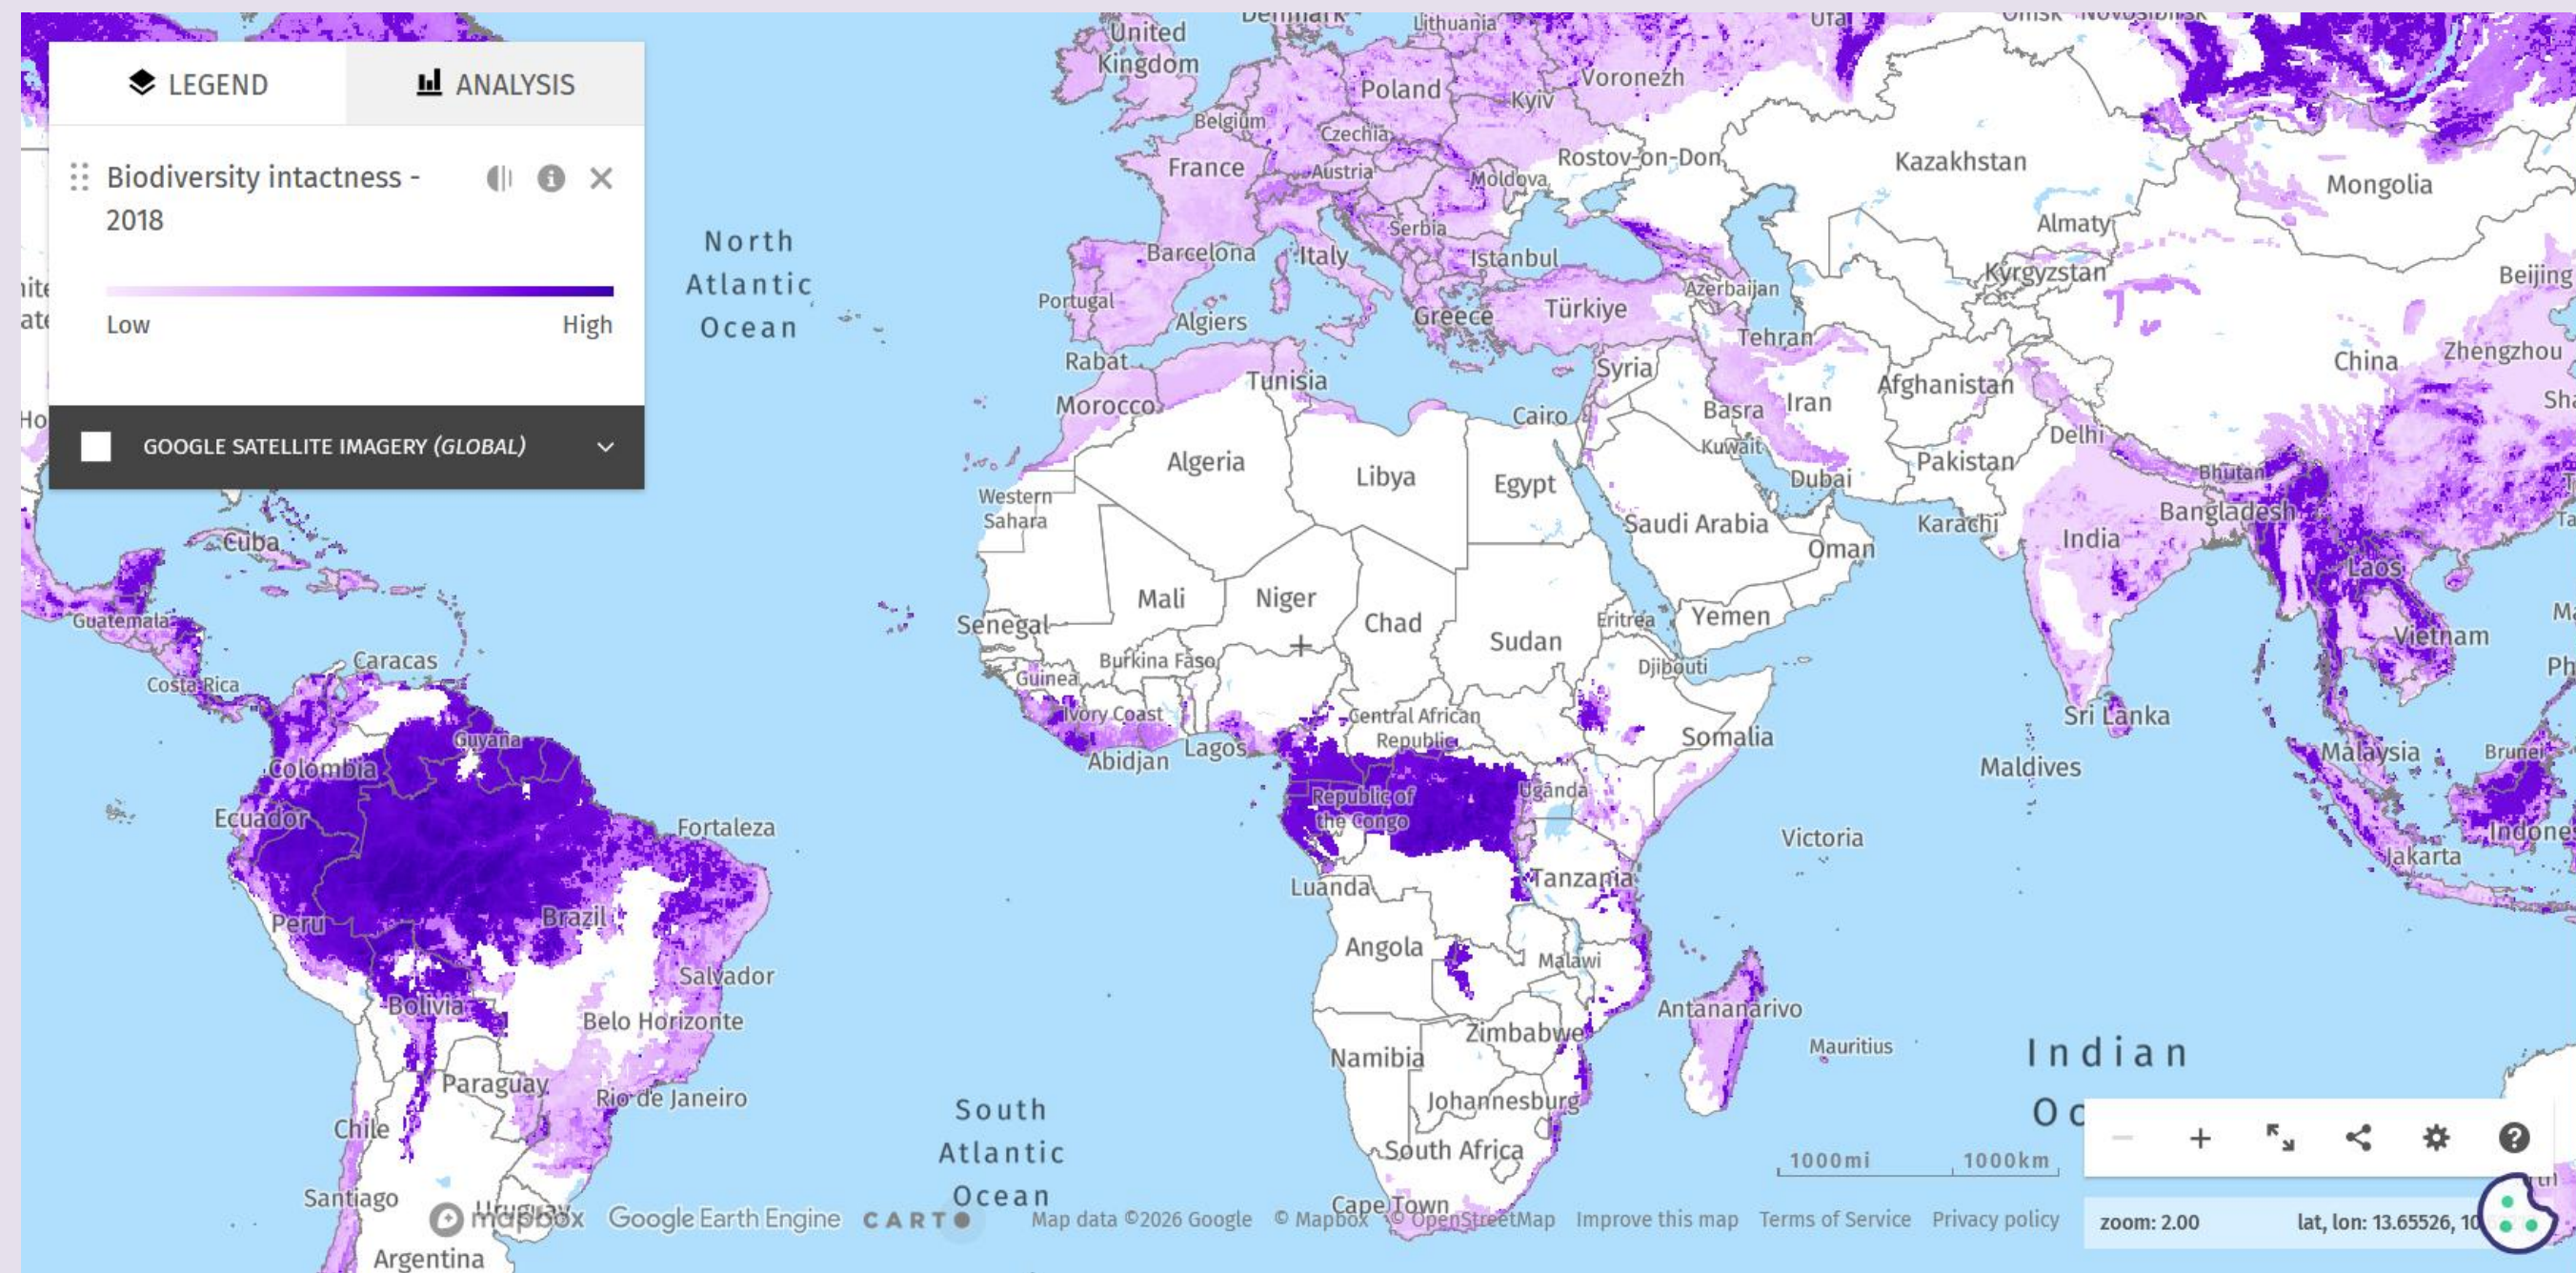

Steps: Making and sharing a web map?

1. Log into your ArcGIS Online Account.
2. Click MAP Tab to open the map viewer.
3. Select a basemap and zoom into your city of interest.
4. Add your data layers and specify how each will be symbolized and displayed.
5. Create pop-ups that enable users to explore the clicked-on features.
6. Save your map.
7. Document it with an eye-catching thumbnail, a good description, and a thoughtful name.
8. Share your map.

Guided Practical on
creating a protected
and conserved areas
web map

Module 1: | Session 2: Building Interactive Web maps

Considerations

1. What is it I want to communicate?
2. What question are you trying to answer?
3. What is the goal of the mapping project?
4. What do I want to communicate?

Thank you
