Greater C a Valley Multi-Species Connectivity Field Survey

C a Valley multi-species & connectivity-barrier survey: Field data collection form covering species observations (functional group, species/common name, photo, count, behaviour, habitat, restoration evidence) and physical movement barriers (type, photo, permeability), plus a visit header (date, site, weather, GPS).

Built to merge directly into the coa-connectivity-lab pipeline's existing functional-group taxonomy and ground-truth its resistance-surface layers.

Scope: horses and dung beetles at Vale Carapito, expanded to wildcat, native fish, and invasive species.

Open items: confirm scientific name for the fish species, and finish manual setup (geopoint, repeat groups, constrained dropdowns) in Survey123 web designer.
